Podložna tekućina za staklo (UV primer) je specijalizirano kemijsko sredstvo koje djeluje kao **adhezijski most** između površine materijala i UV tinte. To je ključni element procesa UV tiska na zahtjevnim podlogama.

Uklanja problem slabe adhezije tinte na glatko staklo. Poboljšava **trajnost i otpornost** otiska na pranje i vlagu.
